THE ULTIMATE IN EFFICIENCY, REDUNDANCY & RELIABILITY

The Riello Array is a pre-packaged boiler plant, the new standard in boiler efficiency, redundancy and reliability. This multi modules boiler can provide a high turn down and multiple boiler redundancy in one packaged unit. An Array single boiler features a superior uptime reliability that is only found in a larger boiler plant and multi boiler systems.

KEY FEATURES
One platform, multiple sizes
Built in redundancy. Each 500 MBH module is fully independent and “stand alone” thus allowing boiler operation even if an adjacent module is turned off
Plug & Play installation
Extremely simple to service and maintain
For operation with natural gas or propane
Factory installed flue exhaust damper on each module, allows common venting capability of Array boilers in cascade
Heat Exchanger Protection: Control monitors supply and return temperature and prevents heat exchanger from excessive temperature rise

HIGH PERFORMANCES
Efficiency up to 99%
NOx emissions of 9 PPM at 3% O2
Turndown ratio up to 40:1
ASME Design Pressure 80 PSI
Low noise operation (each module <48 dB)

SUPERIOR DESIGN: STRUCTURE AND MATERIALS
Modular design
Horizontal modules
High quality stainless steel heat exchanger (AISI 316L)
Direct vent / Room sealed combustion

FLEXIBLE INSTALLATION
Direct vent air intake and exhaust up to 100 equivalent feet
6” to 10” venting system that can run horizontally or vertically
Venting Materials: CPVC, PVC, Polypropylene or AL29-4C stainless steel
Available with an air inlet damper for cold climates to prevent outdoor air from entering the heat exchanger in standby mode
ADVANCED PRE–MIX BURNER

The Riello ARRAY Pre–mix combustion system is comprised of a modulating gas valve integrated high performance fan and stainless steel mesh burner. The proportional control guarantees a consistent fuel: air ratio throughout the entire range of modulation resulting in a clean low temperature flame.

HIGH QUALITY HEAT EXCHANGER

- Heat Engine with HELIX TECHNOLOGY™.
- Advanced design for greater reliability and an extended life.
- The heart of the ARRAY boiler is the power unit module.
- Patented heat exchanger geometry consists of two stainless steel smooth pipes working in parallel eliminating the need for internal baffles.
- The design allows minimum waterside pressure drop and efficient heat exchange.
• Tested heat module design
• All piping on top
• Smaller installed footprint
• Assured minimum water flow rate for each module
• One pump for each module
• Stand-alone operation of each module to assure continuous functioning
• No additional boiler pumps or valves are required
• Touch screen controls

**INSTALLATION ADVANTAGES**

• Ease of commissioning & maintenance
• Minimum training required
• Saves space and easy to install
• Perfect for new installation and retrofit projects
• Quick-to-install, cost-efficient accessories
• Cascade up to 8 boilers (64 modules) allows to reach a modulation up to 320:1

**OPERATION & MAINTENANCE**

• Internal cascade redundancy always delivers reliable performance with no downtime
• Simple maintenance: each module can be serviced while the others are running
• Easy roll-out module configuration: the boiler can work with one or more modules removed
CONTROL DEVICES AND HUMAN INTERFACE

STANDARD ON-BOARD CONTROLS FEATURES

• 7” color touch screen outside the boiler cabinet
• Graphic display of actual input rate of cascade, boiler and modules
• Simple passages to monitor the whole cascade (up to 8 boilers) or each single module
• Immediate access to Cascade, Supply, Return, Flue temperatures, Fan speed of each module
• Easy access to Settings, Service reminder, Outdoor reset capability, Errors log
• Control provides remote operation through the 0–10Vdc for set point.

CASCADE MANAGEMENT

• Service display inside the cabinet
• Analog input for remote DDC operation
• Onboard ΔT limiting eliminates on/off cycles
• Communication protocol Modbus
